

Hot Cure Sewer Rehabilitation

keeping things moving...

DrainsAid
First Aid For All Your Drains

DrainsAid™ has over 40 years experience of providing drainage repair and rehabilitation services to the UK's regulated Water and Wastewater sector and in recent years we have invested heavily in CIPP lining technology.

Our operations are carried out in strict accord with our Management Systems that are fully accredited to ISO 9001:2015 (Quality); ISO 14001:2015 (Environmental) and ISO 45001:2018 (Health & Safety) standards. Our Health and Safety System is also fully SSIP certified.

We are accredited by Achilles UVDB Verify and RISQS vendor assessment schemes used by the majority of the utility, oil & gas and rail sector clients and Construction Line (Gold) recognised by the majority of public sector clients.

Hot Cure Sewer Rehabilitation

A suitable liner is designed depending on the location and site conditions. The liner is then inverted into the defective pipe by means of water pressure turning it inside out leaving resin on the outside and smooth coating on the inside.

Once in-situ the liner is cured to the latest WIS specification using a steam or hot water boiler in combination with a liner coated with polyurethane or polypropylene for heat resistance creating a durable and successfully rehabilitated pipe with a life expectancy of over 50 years.

In most cases liners can be installed and cured the same day with minimal disruption.

Hot Cure

The process timeline

Initial inspection and
CCTV survey.

Removal of root
infestation or other
obstructions.

Cleaning of existing
pipe by JetVac /
recycling unit.

Inversion of resin liner
and curing.

Final CCTV survey.

Circular
150mm dia to
1500mm dia.

Egg
300mm to
1300mm.

Mouth
300mm to
750mm.

Square
300mm to
750mm.

Profiles and sizes shown are examples. Other shapes and sizes may be available.
Please contact us to discuss your specific requirements.
